

Ecology Survey

As part of their work in Science this term, our Year 9s went on a trip to Broadsands Beach to carry out an Ecology Survey. The students had fun exploring the rocky shore and rockpools exposed at low tide.

They discovered Porcelain Crabs, Razor Shells, Cuttlefish bones and, the prize find, a rockpool full of about 200 Mullet fry, which the boys “rescued” and returned to the sea to prevent the Herring Gulls eating them all.
