

Outcomes:

- Science - learning about reproduction
- Algebra fractions in maths
- Skellig book in English and story writing
- Kindle reading
- Duck incubation
- Key-working time
- Engaging activities

**Description of the week:**

This week in science students have been learning about sexual and asexual reproduction. Students have learned what role genes and chromosomes play and what mitosis and gametes mean in scientific terms.

During Maths some students are focusing on improper fractions and others are still focusing on the topic algebra.

In ICT lessons students are gathering information and learning to read set instructions and input data.

During key-working we are pushing students to read a book on their kindles, spent extra time on their spelling and handwriting and to also spend some time with the school guinea pigs Stuart and Cocoa.

For DofE lessons students have been on walk trails and taken part in physical, team building activities such as; tennis, basketball and football.

Our students (and staff) have also been SUPER excited due to our arrival of our duck eggs which we are going to hatch and rehome!
