

In a heart-warming display of teamwork and discovery, the students of Purple Class recently transformed their classroom into a buzzing garden hub. Guided by a blend of verbal and visual prompts, the pupils embarked on a multisensory journey to bring new life around their classroom and playground.

The activity began by following step-by-step visual guides, the students practiced digging into the cool, dark soil. For many, this was a favourite part of the day—feeling the earthy texture between their fingers and filling their pots with care.

Once the "beds" were ready, it was time for the stars of the show: the seeds. Using precise verbal cues like "pinch" and "sprinkle," the children carefully placed their tiny seeds into the centre of each pot. The classroom was filled with focused silence as students concentrated on their delicate task, ensuring every seed was tucked in just right.

The session reached a refreshing finale with the watering bottles. Each student followed visual "water" symbols to gently give their seeds a drink. From the rhythmic sound of the spraying water to the sight of the soil turning a rich, dark brown, every sense was engaged.
