

This week, Green Class has been learning about parts of a plant and their life cycles. We were able to match symbols and text to real photos, we have planted seeds in flowerpots, and also dug holes and planted some sprouting potatoes in the ground.

These experiences link to our prior learning; using our senses to experience seasonal changes and growth. We used fine motor skills, maths skills, literacy and reading skills.

This also sets us up for careers, such as gardening and farming, in our Learning for Life jobs topic.
